

THE ART OF CONVERTING

TR415

The new generation TR 415 answers the needs of the most demanding companies Both in terms of quality and productivity.

The main features of the TR Series include:

- ▶ The **sturdy mechanical construction** with the **over-head web path** configuration
- ▶ The **extremely flexible lay-out** which allows the **integration of several automations & quality control devices**
- ▶ **Advanced electronic control devices** with an **operator friendly touch panel system**

The **high production speeds** together with the automatic change-over of the **turret system** drastically reduce Machine's **down-time, increasing productivity** and **setting an efficient production rhythm** where the operator can position the new cores (with the automatic motorized laser system) while the machine is running.
